

THE GUIDE

2011 FORT LAUDERDALE INTERNATIONAL BOAT SHOW

PUBLISHED BY **YACHTS**

VSY- VIAREGGIO SUPERYACHTS • THE DIFFERENCE.

Innovative, industry-leading technology, exceptional attention to detail, timeless design, complete fulfillment of the customer's wishes, environmental consciousness, high respect for the safety and health of the workforce: this is the essence of VSY- Viareggio Superyachts' philosophy of work on all fronts. Since 2004 the shipyard, based in Italy's focal yacht-building area, Viareggio, has been engaged in building mega yachts of over 60 meters (196 feet). VSY is by now widely recognized as a builder of the highest calibre, both in private circles and publicly as evidenced by the numerous international awards given to their first project, the 62-meter (203 feet) **Candyscape II**.

At VSY the best expression of luxury and comfort is however achieved in the highest respect for the marine environment. VSY takes this seriously and thus is proud to be the recipient of strict and prestigious certifications such as the RINA GreenStar Plus Gold and ABS ES (Environment Safety).

The long list of features and care they put into their Total Eco-Yachts is impressive and results in a simple but effective formula: Maximum Efficiency on Minimum Energy- this without damage to the ecosystem.

All of this is in pursuit of VSY's essential mission: to produce a few but exclusive superyachts, totally custom-built, innovative and technologically superlative. Simply unique yachts which fully embrace the yard's Eco Green vision, introducing the new and exclusive concept of "deeper luxury".

Following the great success of their 62-meter superyachts **Candyscape II** and **RoMa**, VSY is currently busy completing their next two floating wonders: a 72-meter (236 feet) flagship scheduled for the 2012 season and a new 64-meter (212 feet) vessel presently awaiting her discerning owner for completion in 2013. The project, **Stella Maris**- as pictured above- is by architect Espen Øino in cooperation with Laurent Giles Naval Architects and blends traditional elements of design and layout with interesting new variations. The staggered internal decks, the heights of the saloons and the innovative form of the bow are a few examples. The resulting layout is one of volume and space more usually seen in yachts of greater dimensions than 2,270 GRT.

The yacht is equipped with a certified helideck, a deck for the exclusive use of guests, a separate Owner's deck, saloons with a

finished height of 270 cm (8.86 feet) and the pleasure of enjoying green landscapes at sea with real house-plants crossing the decks thanks to micro-climates installed on board.

Always striving for uniqueness in a completely functional format, the concepts of the internal and external spaces are interpreted in a very unconventional way. As an example, in the two main saloons and in the owner's cabin there are spectacular walls made entirely of glass, allowing the eye to see and enjoy beyond what is usually an obstructive barrier.

With the collaboration of a discerning and creative owner, this new project holds the promise of an entirely new dimension of environmentally sound, "deeper luxury".
